Germanic Beer Brewing Rediscovered

University Brewery Combines Tradition and Innovation

Anhalt University of Applied Sciences combines innovation and science, acts as an important regional technology driver, and offers students practical training in the brewing industry. As part of their studies, students researched historical recipes and herbs that were already used by Germanic tribes over 1,500 years ago. Thanks to these findings and modern manufacturing technologies, the university brewery in Köthen developed a new recipe based on historical sources. „Germanic Beer" utilizes herbal blends that complement modern hops and were already popular back then. The recipe combines various malts and primitive botanicals:

- **Malt base:** A carefully balanced combination of barley, rye, and wheat malt gives the beer a full-bodied, multi-layered character, reminiscent of the grain diversity of past epochs.
- **Historical herb blend:** Today's standard hops are purposefully complemented by herbs that were used more than 1,500 years ago:
  - ➔ Juniper berries for a fine, resinous spice,
  - ➔ Rosemary for a Mediterranean-spicy depth,
  - ➔ Coriander for a subtle, fresh citrus note,
  - ➔ Yarrow for a traditional, noble bitterness.

Using state-of-the-art manufacturing technologies in the university brewery in Köthen, we manage the balancing act between historical authenticity and uncompromising quality with this handcrafted beer. This beer is more than a drink - it is the tangible result of research and hands-on training.

The teaching and experimental brewery of Anhalt University of Applied Sciences is your competent partner for special brewing projects.
