OUR STORY

The **Future Internet Lab Anhalt** at **Anhalt University of Applied Sciences (Germany)** is hosting an inter-regional innovation forum, iRIF, in Tashkent and Almaty. Drawing inspiration from the success of our previous conferences in Kazakhstan, Uzbekistan, and North Macedonia in 2022 and 2023, where industrialists, scientists, and energy specialists converged, we are excited to create a dynamic space for collaboration and innovation.

OUR GOAL

we want to give priority to research ideas that massively increase the innovation potential of German SMEs and create for them new opportunities. Platform, where after technical presentations, there will be plenty of room for an **exchange of ideas** between representatives from **different countries**. This idea exchange should lead to new approaches for products and solutions in the target countries, realized through **joint R&D projects**.

OUR TARGET GROUP

The main idea is to bring together a group from German universities, technical managers from industry, especially from **SMEs**, and the management of large research institutions to hold a conference on the topics of **Renewable energies, IIOT, and Lithium**. On the part of the hosts, representatives of universities, research institutions, and industry, are extended by representatives from public administration and interest groups.
